Fall 2020

Student *Xige Michael Chen* did the DFS, BFS and student *Jeong Woo Park* did the DFS, BFS both separately initially. After, both cases worked initially, both students debug together and implement optimizations into DFS.

We wrote tests cases co-currently using Vscode *liveshare* (similar to Google Docs for code). The *liveshare* is was hosted on *Xige Michael Chen's* computer and the Git commits was issued primarly through *Xige Michael Chen's* Github account. Both students wrote half of the tests cases. We spent approximately 2-3 hrs separately developing our original implementation. And around 12 hours across several days in *liveshare* for debugging and testing.
